Generalized Duality for Multi-Objective Programming Involving Set-Functions

Anton BĂTĂTORESCU

November 4, 2004

Abstract - We study generalized Mond-Weir duality for multi-objective programming involving set functions which satisfy appropriate V-type-I univexity conditions. We establish weak, strong and converse duality theorems.

Key words and phrases : duality, multiobjective programming, set functions, V-type-I univexity.
